Summary

Machine Learning Engineer with proven experience training and deploying CNN models on large-scale datasets (70K+ images, 90% accuracy). Skilled in end-to-end ML pipelines – data preprocessing, model development, and deployment – using TensorFlow, LSTM, and NLP-based approaches. Experience building AI applications with Google Gemini API and developing predictive models for real-world use cases. National-level hackathon winner and Google Cloud GenAI certified.

Technical Skills

- **Languages:** Python, SQL
- **Machine Learning:** Supervised/Unsupervised Learning, Deep Learning (CNN, LSTM), NLP, Time-Series Forecasting
- **Libraries:** Pandas, NumPy, Scikit-learn, TensorFlow, Keras, Matplotlib, Seaborn, OpenCV
- **Data Skills:** Data Cleaning, EDA, Feature Engineering, ETL Pipelines, Data Visualization
- **Tools:** Git, Jupyter Notebook, Microsoft Excel, Power BI, Google Colab, VS Code, Streamlit
- **Cloud & APIs:** Google Cloud (GenAI), Gemini API, OpenAI API, REST APIs, Firebase
- **Databases:** MySQL, MongoDB, Firebase Realtime Database

Experience

AI/ML Intern

CodexIntern

April 2025 – October 2025

Hyderabad, India

- Built a voice-enabled assistant that tied together WhatsApp, YouTube, weather, and email services using NLP-based intent handling.
- Developed a multi-turn chatbot using the Gemini API with conversation memory and live data integration to handle user queries reliably.
- Reduced failure points across the system by setting up structured logging and fallback handling for API errors.

Freelance ML Engineer

Client Project (Confidential)

May 2024 – December 2024

Hyderabad, India

- Trained a CNN model on **70K+ labeled plant images** to classify crop diseases, reaching **over 90% accuracy** on validation data.
- Managed the complete ML pipeline independently – image augmentation, class balancing, preprocessing, and model training.
- Deployed the trained model for real-time inference on unseen images, making it ready for practical use beyond the development environment.

Full Stack Developer Intern

EliteTech

December 2024 – January 2025

Remote

- Built 3 web applications – a To-Do app, portfolio site, and a basic e-commerce platform – using React.js.
- Worked across UI components, routing, and API integration, following standard frontend development practices.

Projects

Face Recognition Attendance System [Repo]

Python, OpenCV, Firebase

- Developed real-time facial recognition system using OpenCV to identify students from live camera feed and automate attendance marking.
- Implemented face encoding algorithms with Firebase Realtime Database integration for instant logging of attendance records and timestamps.
- Built live UI displaying recognition feedback, making the system deployment-ready for classroom and office environments.

StockMentor – Stock Trend Predictor [Repo]

Python, Pandas, LSTM

- Built a data pipeline to pull and preprocess stock market data from external APIs, handling missing values and feature scaling for time-series analysis.
- Trained an LSTM neural network model to forecast stock price trends, optimizing hyperparameters for improved prediction accuracy.
- Generated short-term predictions (5–30 days) with interactive visualizations comparing forecasted vs actual trends for actionable insights.

Education

Jawaharlal Nehru Technological University Hyderabad B.Tech in Computer Science and Engineering – Specialization: AI & Machine Learning	2021 – 2025 <i>CGPA: 7.44</i>
Kendriya Vidyalaya Gachibowli Higher Secondary (CBSE)	2019 – 2021 <i>CGPA: 8.2</i>

Certifications & Achievements

- Google Cloud – Generative AI (5 Skill Badges)
- Infosys Springboard – Generative AI Certification (2025)
- NPTEL – Python for Data Science
- Hackathon – 1st Prize, Mind Plug Fiesta (National Level)

Soft Skills

Adaptability | Analytical Thinking | Communication | Problem-Solving | Teamwork | Time Management
